

## Errata List

The following errata appear in the fourth edition of the book “Control Theory Fundamentals”, published in February 2020.

p.259 (Appendix E) **Erratum.**

The text is correct; however, a minor error exists in the Matlab scripts which were used to generate the plots and numerical data. The equation in position A(4,4) involves the frictional coefficient  $g_2$  for mass  $M_2$ . The scripts erroneously use  $g_1$  here. The differences produced by this propagate through the Appendix and are too numerous to list in detail here. Readers are advised that while the numerical and graphical results are slightly different from what was intended, the qualitative results are similar and the general design procedure would be unchanged had the correct coefficient been applied. The error will be corrected in the next edition of the book.
